

# How to Connect to Your Work PC from Home: Luke's Method

This method of connecting to your workstation uses your web browser (Firefox, Edge and Chrome).

Open your web browser and navigate to the address below (you can copy and paste and make a browser bookmark):

<https://staffbridge.wolfson.cam.ac.uk:4433/sslvpnVirtualOffice.html>

you will see this login box

Use the VPN credentials as given by the IT Office (we will try to make them the same as your windows login) to login to the VPN system.

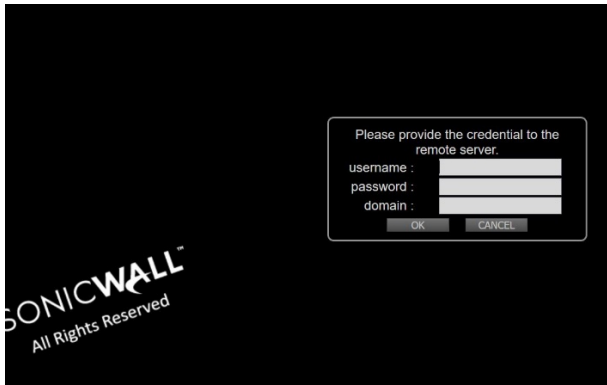

Domain: collegeoffice.wolfson.cam.ac.uk

You have now accessed the Wolfson network and should now see this screen:

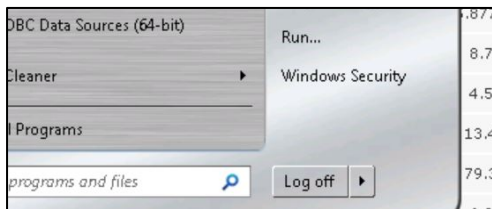

Virtual Office Bookmarks ▼	Host/IP Address	Service	Configure
Alex	192.168.64.122	RDP	⚙️ ✕
Cascade	192.168.64.50	RDP	⚙️ 🔄
CCTV1	192.168.64.10	RDP	⚙️ 🔄

We will have made a bookmark for your workstation, click on that bookmark. You will see another login screen:

Although it looks very different, this screen will log you into Windows on your workstation, so enter your Windows username and password, and for domain please put: collegeoffice

You will now see your workstation desktop screen in your browser! Work as normal, then when you want to logout please logout the same as if you were at your PC.

You are now back at the Virtual Office page, click the logout button to finish your VPN session.
